

rolling storage

Profile Systems rolling storage units are a high density storage solution that sets the new standard in storage excellence with superb looks, performance and space-saving abilities. Our range of timber and metal mobile systems are designed to offer you a storage solution that is customised to your space and appearance requirements.

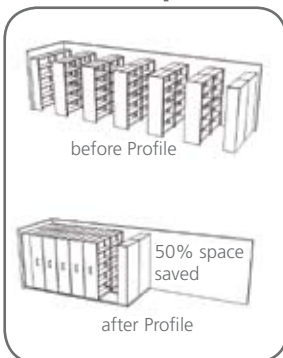

Profile Systems rolling storage units run on a track system that can be laid directly on the floor, mounted on a base or a fixed floor track. Our rolling storage units can be operated as a manual, mechanically assisted or electrically powered unit. Profile Systems rolling storage can be designed to accommodate almost any space. Unit height can vary and is determined by the type of media being stored and any Occupational Health & Safety considerations.

Also available in metal finish

Our rolling storage units are fitted with a key locking system as standard for extra security. Units can also be fitted with an overhead locking system with combination lock. Profile Systems rolling storage units are available in over 400 Dulux colours, laminate or veneer finishes.
